

# Screen Standardization Requirements

## 1. Screen Layout

- General layout requirement:

| Category              | Rules                                                                                                                                                                                                                                                                                                                            |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Minimum screen size   | At least 1366×768 pixels. Layouts must be able to automatically adapt to any screen sizes, resolutions, and aspect ratios.                                                                                                                                                                                                       |
| Page titles           | Place the main title at the top-center of every screen. Use only one main title per screen                                                                                                                                                                                                                                       |
| Action buttons        | Standard action buttons must be positioned in a consistent, recognizable location, typically at the bottom vertically and aligned to the center or right horizontally. Primary buttons (Upload, Save, Publish) go at the bottom-right or top-right. Secondary buttons (Cancel, Filter) sit next to them but look less prominent. |
| Menu Bar / Navigation | It is recommended to place global navigation at the top-right or in a left sidebar. Highlight the current page clearly.                                                                                                                                                                                                          |
| Content area          | Main content sits in the center. Side panels (filters, metadata) go on the left or right. Keep consistent spacing between sections.                                                                                                                                                                                              |
| Responsive behaviour  | On smaller screens: stack columns vertically, shrink padding, and make buttons full-width. Never hide essential actions.                                                                                                                                                                                                         |

- Customer flow layout requirement:

| Category | Rules                                                                                                                                                                                         |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Header   | A top-anchored, sticky navigation bar, allowing page content to scroll smoothly underneath. It houses the AIMS logo (left) and interactive actions like Theme Toggle, Login, and Cart (right) |

|              |                                                                                               |
|--------------|-----------------------------------------------------------------------------------------------|
| Content area | Centered with a maximum width for maximum readability                                         |
| Footer       | Anchored to the bottom of the viewport, providing standard copyright and contact information. |

- Manager / Admin flow layout requirement:

| Category           | Rules                                                                                                                                      |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Sidebar Navigation | A fixed left-hand sidebar serving as the primary navigation hub, housing the logo, navigational tabs, and the user profile/logout actions. |
| Header             | A top header for the active viewport containing a mobile menu toggle, page title, and contextual actions.                                  |
| Content area       | Implements a grid system to cleanly separate complex data into easily digestible, independent modules.                                     |

## 2. UI Kit

| Category           | Rules                                                                                                                                                                                                                                                                                                                                                   |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Fonts & Typography | <p>Use 2 cohesive font families consistently throughout the entire application.</p> <ul style="list-style-type: none"> <li>- For Headings: Use Montserrat</li> <li>- For UI / Body Text: Be Vietnam Pro</li> </ul> <p>A clear hierarchy of text sizes must be defined, distinguishing between main titles, sub-titles, and standard paragraph text.</p> |
| Color Palette      | <p>Use defined color roles instead of hardcoding colors for theme compatibility</p> <ul style="list-style-type: none"> <li>- Primary color: Deep Violet / Indigo</li> <li>- Backgrounds: Pearl White</li> </ul>                                                                                                                                         |

|                  |                                                                                                                                                                                    |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  | <ul style="list-style-type: none"> <li>- Status colors: Fractional opacity layers are used instead of harsh solid colors for Success, Destructive for Errors / Failures</li> </ul> |
| Icons & Graphics | Use Lucide icon library universally<br>Images must maintain correct aspect ratio and quality                                                                                       |
| Spacing          | Follow a steady rhythm: 4px, 8px, 12px, 16px, 24px, 32px for gaps and padding.<br>Use border radii and deep, soft shadows to create depth for shapes.                              |

### 3. Data formatting

| Category       | Rules                                                                                                                                                                                                                                                                                                                                      | Examples                                                                  |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Numeric values | Use a comma separator every 3 digits. For decimal numbers, use dot separator to separate whole part and fractional part. There should only be exactly 2 digits after the dot separator.                                                                                                                                                    | 1,450,800.00<br>93,491.30<br>89.33<br>...                                 |
| Currency       | Follow Vietnamese standard currency format: a number adhering to numeric value rules (with no fractional part) followed by the currency symbol đ.                                                                                                                                                                                          | 1,000,000đ<br>730,000đ<br>45,000đ                                         |
| Date & Time    | Use standardized pattern commonly used in Vietnam (Day of the week is optional) <ul style="list-style-type: none"> <li>- Date: [Day of the week] DD/MM/YYYY</li> <li>- Time: HH:mm:ss (24-hour format)</li> </ul> Never show raw timestamp (YYYY-MM-DDTHH:mm:ssZ)<br>For recent timestamps of up to 1 week before now, show relative time. | 18/04/2026<br>17:45:49<br><br>15 minutes ago<br>4 hours ago<br>3 days ago |
| Text handling  | Support all Unicode characters using                                                                                                                                                                                                                                                                                                       |                                                                           |

|                    |                                                                                                                     |                                            |
|--------------------|---------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
|                    | UTF-8 format                                                                                                        |                                            |
| Media Duration     | Show CD and DVD duration as HHhMMm or MMmSSs                                                                        | 143 minutes = 2h23m<br>231 seconds = 3m51s |
| Product dimensions | Each dimension: width, height, length must follow the above numeric value rule and formatted as width×height×length | 13.4×1.6×9.2                               |

## 4. Control rules

- Validation
- Navigation
- Error handling
- ...

| Category           | Rules                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Input validation   | <p>Check inputs in this order:</p> <ul style="list-style-type: none"> <li>- Is the field empty?</li> <li>- Is the format correct?</li> </ul> <p>Only show errors after the user leaves the field or clicks submit. Messages must explain what's wrong and how to fix it.</p>                                                                                          |
| Error handling     | Show friendly, specific messages. Log technical details for developers, but never show raw errors to users. If a request fails, offer a Retry button.                                                                                                                                                                                                                 |
| Navigation & focus | <p>When users press Tab, fields should follow a logical top-to-bottom, left-to-right order. Popups (like help screens) should block interaction with the main screen until closed.</p> <p>Users are consistently provided with "Go Back" or "Cancel" buttons to safely return to the previous state without committing changes. No complex shortcuts are required</p> |
| Secondary          | Secondary interfaces, such as help or manual screens,                                                                                                                                                                                                                                                                                                                 |

|                |                                                                                                    |
|----------------|----------------------------------------------------------------------------------------------------|
| screens        | should appear as popups to prevent interaction with the main screen until the popup is closed.     |
| Loading states | Show a skeleton screen or spinner while data loads.<br>Never leave a blank white space.            |
| Empty states   | When a list has no items, show: a helpful message + simple illustration + a button to take action. |
